Java Lambda Expressions

Rank: 3047985 | Points: 0/25

Problem | Submissions | Leaderboard | Discussions | Editorial

This Java 8 challenge tests your knowledge of Lambda expressions!

Write the following methods that return a lambda expression performing a specified action:

1. PerformOperation isOdd(): The lambda expression must return $true$ if a number is odd or $false$ if it is even.
2. PerformOperation isPrime(): The lambda expression must return $true$ if a number is prime or $false$ if it is composite.
3. PerformOperation isPalindrome(): The lambda expression must return $true$ if a number is a palindrome or $false$ if it is not.

Input Format

Input is handled for you by the locked stub code in your editor.

Output Format

The locked stub code in your editor will print T lines of output.

Sample Input

The first line contains an integer, T (the number of test cases).

The T subsequent lines each describe a test case in the form of 2 space-separated integers:

The first integer specifies the condition to check for (1 for Odd/Even, 2 for Prime, or 3 for Palindrome). The second integer denotes the number to be checked.

```
5
1 4
2 5
3 898
1 3
2 12
```
