Topics

Given two strings, determine if they share a common substring. A substring may be as small as one character.

Example

`s1 = 'and'`

`s2 = 'art'`

These share the common substring `a`.

`s1 = 'be'`

`s2 = 'cat'`

These do not share a substring.

Function Description

Complete the function `twoStrings` in the editor below.

`twoStrings` has the following parameter(s):

- string `s1`: a string
- string `s2`: another string

Returns

- string: either `YES` or `NO`

Input Format

The first line contains a single integer `p`, the number of test cases.

The following `p` pairs of lines are as follows:

- The first line contains string `s1`.
- The second line contains string `s2`.
