Problem List

796. Rotate String

Easy Topics Companies

Given two strings `s` and `goal`, return `true` if and only if `s` can become `goal` after some number of shifts on `s`.

A shift on `s` consists of moving the leftmost character of `s` to the rightmost position.

- For example, if `s` = "abcde", then it will be "bcdea" after one shift.

Example 1:

Input: `s` = "abcde", `goal` = "cdeab"

Output: true

Example 2:

Input: `s` = "abcde", `goal` = "abced"

Output: false

Constraints:

- `1 <= s.length, goal.length <= 100`
- `s` and `goal` consist of lowercase English letters.

Code

Java Auto

```
1 class Solution {
2     public boolean rotateString(String s, String goal) {
3
4         // Lengths must be equal
5         if (s.length() != goal.length()) {
6             return false;
7         }
8
9         // Check if goal is present in s + s
10        String doubled = s + s;
11
12        return doubled.contains(goal);
13    }
14 }
```
