

1408. String Matching in an Array

Easy Topics Companies Hint

Given an array of string `words`, return all strings in `words` that are a **substring** of another word. You can return the answer in **any order**.

Example 1:

Input: `words = ["mass", "as", "hero", "superhero"]`

Output: `["as", "hero"]`

Explanation: "as" is substring of "mass" and "hero" is substring of "superhero".
["hero", "as"] is also a valid answer.

Example 2:

Input: `words = ["leetcode", "et", "code"]`

Output: `["et", "code"]`

Explanation: "et", "code" are substring of "leetcode".

Example 3:

Input: `words = ["blue", "green", "bu"]`

Output: `[]`

Explanation: No string of words is substring of another string.

Constraints:

- $1 \leq \text{words.length} \leq 100$
- $1 \leq \text{words}[i].\text{length} \leq 30$
- `words[i]` contains only lowercase English letters.

Code

Java Auto

```
1 import java.util.*;
2
3 class Solution {
4     public List<String> stringMatching(String[] words) {
5
6         List<String> result = new ArrayList<>();
7
8         for (int i = 0; i < words.length; i++) {
9
10            for (int j = 0; j < words.length; j++) {
11
12                if (i != j && words[j].contains(words[i])) {
13                    result.add(words[i]);
14                    break;
15                }
16            }
17        }
18    }
19 }
```
