1672. Richest Customer Wealth

EasyTopicsCompaniesHint

You are given an $m \times n$ integer grid `accounts` where `accounts[i][j]` is the amount of money the i^{th} customer has in the j^{th} bank. Return the **wealth** that the richest customer has.

A customer's **wealth** is the amount of money they have in all their bank accounts. The richest customer is the customer that has the maximum wealth.

Example 1:

Input: `accounts = [[1,2,3],[3,2,1]]`

Output: 6

Explanation:

1st customer has wealth = 1 + 2 + 3 = 6

2nd customer has wealth = 3 + 2 + 1 = 6

Both customers are considered the richest with a wealth of 6 each, so return 6.

Example 2:

Input: `accounts = [[1,5],[7,3],[3,5]]`

Output: 10

Explanation:

1st customer has wealth = 6

2nd customer has wealth = 10

3rd customer has wealth = 8

The 2nd customer is the richest with a wealth of 10.

Example 3:

Input: `accounts = [[2,8,7],[7,1,3],[1,9,5]]`

Output: 17

Constraints:

</>Code

Java🔒Auto

1

class Solution {

2

public int maximumWealth(int[][] accounts) {

3

int maxWealth = 0;

4

for (int i = 0; i < accounts.length; i++) {

5

int wealth = 0;

6

for (int j = 0; j < accounts[i].length; j++) {

7

wealth += accounts[i][j];

8

}

9

if (wealth > maxWealth) {

10

maxWealth = wealth;

11

}

12

return maxWealth;

13

}

14

}

15

}
